

Pharma R&D Spotlight (student-only event)

Interact with Genentech scientists to learn how computational modeling, automation, and AI/ML tools are transforming the chemistry side of drug development. A short presentation will be paired with a laboratory tour to highlight the path from intelligent design through smart synthesis optimization to the manufacturing of active pharmaceutical ingredients.

Please note that registration for this session is open to STUDENTS ONLY. Attendance is further limited by space constraints and will be capped accordingly.

Safety Attire: Participants wishing to join the laboratory tour must wear closed-toed/closed-sided shoes with a sturdy heel and have legs fully covered. Additional PPE (disposable lab coats and safety glasses) will be provided.
